---

Professional Summary

I am a first-class BSc Computer Science graduate with a broad foundation across software engineering, AI systems, and networked applications. My experience spans backend and frontend development, machine learning pipelines, data engineering, and infrastructure support. I've contributed to full stack projects in fast-paced, Agile environments, and enjoy solving real-world problems using clean, scalable code. I'm now eager to bring my adaptability and technical versatility to a forward-thinking tech team.

Technical Skills

- Python, Java, JS, C++, C and C#
- SQL, PostgreSQL, MongoDB
- React, Node.js, HTML/CSS
- API development and Integration
- Cloud computing with AWS and Docker

Others Skills

- Team working with Agile
- Networking fundamentals
- Data handling, modelling, and analysis
- Version control with Git
- CLI tools, scripting, troubleshooting

Work History

AI Software Developer | AutoMEE Limited
London, March 2025 to July 2025

- Developed full stack tools using React and Node.js to automate team workflows
- Built backend features using Python and Java for dashboard and internal APIs
- Used AWS tools and CI pipelines to support testing and delivery

Software Developer | Aakvaech Limited
Dar Es Salaam, May 2024 to September 2024

- Worked on backend services using Java for scalable infrastructure
- Built React interfaces for internal tools used across departments
- Maintained internal SQL scripts and automation tasks with Bash

IT Support Assistant | Workers Compensation Fund Tanzania
Dar es Salaam, May 2023 to September 2023

Sports Administrator (Sport Activator) | City St George's Students' Union
London, September 2025 to December 2025

Restaurant Server | Melanzana Restaurant

Flic en Flac, Mauritius, October 2023 to March 2024

Education

Bachelor of Science (Hons): Computer Science

Middlesex University, London, February 2023 to June 2025

- Studied AI and machine learning using Python libraries such as Scikit-learn and NumPy
- Built practical web applications using APIs, authentication, and cloud storage
- Worked with networking labs simulating common protocols and fault tolerance
- Final-year project focused on predicting pluvial flooding and proposing preventative urban designs using rainfall data, python-based visualisation and ML algorithms

Projects

ML Output Logger - Developed a Python tool to track predictions and flag unusual outputs during model evaluation stages.

Stock Exchange Simulator - Created a program which emulates a real time stock exchange using scraped data and algorithms

Shipping Data Manager - Built a robust DataFrame system to manage cargo movement and customer records for a shipping company, improving client data accuracy and export times.

Extracurricular activities

- Former national-team swimmer for Tanzania
- GDPR Trained
- Certified in AWS , TypeScript , Kubernetes, Docker and Designing RESTful APIs
